As a long haul truck driver, I rely on my satellite radio to alert me to traffic, weather and other conditions in major metropolitan areas long before I can get the local channels. Therefore I can better plan my trip and avoid contributing to the congestion of the local highways. If this service is taken away, I see roadways that will be less safe and the cost to the consumer will go up because of longer wait times for goods. When we are aware of congested highways, we can avoid those routes, therefore saving fuel and not contributing to the poor air quality also. Please carefully consider all of the impacts and reject the NAB petition.
Thank you,
Donald Bryan
